# About This Course

## Learning Objectives

Upon completion of this course, the student should be able to:

7. Describe the early attempt to calculate appropriate life insurance amounts known as the human life value method.
8. Understand the importance of basing client insurance requirements on a thoroughgoing analysis of needs.
9. Gather the appropriate client information required to perform an insurance needs analysis.
10. Identify and calculate a client's family's lump-sum needs at the death of a breadwinner.
11. Understand the Social Security survivor benefits that need to be considered in analyzing survivors' needs for life insurance to replace income.
12. Identify and calculate survivors' income needs during the dependency period, blackout period and retirement period.

## How You Will Learn

In this course you will be introduced to terms and concepts used in connection with personal life insurance planning. Each new term is defined in the text and included in the Glossary. The concepts are explained and, where appropriate, are demonstrated through the use of examples.

At the conclusion of each lesson, a Chapter Review is presented to test comprehension of the material presented in the chapter. A response is given to each answer you select to the questions in the Chapter Review affirming the correct choice or explaining why the choice you selected was incorrect.

## Why This Information is Important and How You Can Use It

This information is important for agents selling insurance products to customers and for advisers assessing the appropriateness of a life insurance recommendation for a client. An understanding of the methods used to determine suitable life insurance amounts to meet survivors' lump-sum cash needs and income needs will assist the agent and adviser to better serve consumers and help ensure that appropriate life insurance amounts are recommended and purchased when they are suitable to meet client needs.
