# Preface

---

For many organizations, the single most critical accounting topic is the recognition of revenue – when can it be recognized, and how much? If they do not recognize the correct amount of revenue, it may be necessary to engage in adjustments at a later date, which can cause readers to doubt the veracity of their financial statements. In *Revenue Recognition*, we present the recognition principles needed to account for contracts with customers, using summarizations of the original accounting standards and many explanatory examples. A number of peripheral issues are also covered, including the treatment of variable consideration, noncash consideration, price discounts, subsequent price changes, consignments, licensing, repurchase agreements, disclosures, and much more.

You can find the answers to many questions about revenue recognition in the following chapters, including:

- What are the steps involved in revenue recognition?
- What is considered to be a performance obligation?
- How do I deal with the possibility of a revenue reversal?
- How do I account for the financing component of a sale transaction?
- How do I allocate a price to a product that has no standalone selling price?
- When should I use input or output methods to determine progress completion?
- When is the seller considered a principal or an agent?
- Are there ways to streamline the recognition of revenue?

This course is updated regularly to reflect changes in the accounting standards.
